Application/Control Number: 09/611,282

Art Unit: 2183

Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 22-25, 26, 28, 34, 35, and 37, drawn to a dispatch/execution unit with an execution unit to perform operations, classified in class 712, subclass 214.

- II. Claims 7, 9, 13-18, 26, 27, and 31-33, drawn to fetching and executing both branch and fall-through paths, classified in class 712, subclass 235.
- III. Claims 26, 30, and 36, drawn to intrasystem connection in a computer system, classified in class 710, subclass 100.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and (I and III) are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because, as is evidenced by the multiple independent and dependent claims without the particulars of inventions I and III, the invention can be practiced without the dispatch/execute construction of I or the hub-controllers construction of III. The subcombination has separate utility such as the dispatch/execute unit of invention I in a system without the particulars of inventions II and III or the hub controllers of invention III in a system without the particulars of inventions I and III.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Art Unit: 2183

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Claim 26 link(s) inventions I, II, and III. The restriction requirement among the linked inventions is subject to the nonallowance of the linking claim(s), claim 26. Upon the allowance of the linking claim(s), the restriction requirement as to the linked inventions shall be withdrawn and any claim(s) depending from or otherwise including all the limitations of the allowable linking claim(s) will be entitled to examination in the instant application. Applicant(s) are advised that if any such claim(s) depending from or including all the limitations of the allowable linking claim(s) is/are presented in a continuation or divisional application, the claims of the continuation or divisional application may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Where a restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. *In re Ziegler*, 44 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

Applicants are pursuing multiple variants of diverse inventions. The examiner can no longer bear the burden of searching and prosecuting applicant's multiple inventions. Therefore, the examiner is restricting applicant's claims at this time.

Any inquiry concerning this communication should be directed to William M. Treat at telephone number (571) 272-4175. The examiner works at home on Wednesdays but may normally be reached on Wednesdays by leaving a voice message using his office phone number. The examiner also works a flexible schedule but may normally be reached in the afternoon and evening on three of the four remaining weekdays.
